CANtrace 3.16

The main feature in release 3.16 is that CANtrace now includes support for Softing's CANpro USB hardware interfaces, as well as any other interface using the Softing API.

There's also improvements to the user experience when running on Windows 10, the CANtrace window should no longer hide behind other windows or the taskbar when starting up.

Another new thing you will notice is that when playing back a log file, there's now an option to play back at the rate recorded, instead of at full speed. There's also a change when assigning databases to channels. The default channel is now 1, which is what most users want.

Also improving the user experience is a function that automatically removes space characters and line endings from before and after the license key, when adding it. These characters, if present, are invisible but makes the license key invalid and was causing issues with license keys copied from email messages.

Finally the EULA has been updated with a privacy section compliant with the EU data protection laws (GDPR) and with this release Windows 8.1 is no longer officially supported. You can still run CANtrace on Windows 8.1, but we don't test or support it anymore.

New and Changed Functionality

- #2275 – Support Softing CAN interfaces
- #2233 – Remove support for Windows 8
- #2163 – Make SW channel 1 the default in associate database
- #2145 – Add GDPR compatible data processing notice in EULA
- #2017 – Insert license contains line ending failed
- #1114 – Play back messages at the rate recorded

Bugfixes

- #2201 – CANtrace starts up behind taskbar in Win10
- #2200 – CANtrace window is hidden when CANtrace starts in Windows 10
- #2147 – CANtrace Installer EULA is not same as the one on Website and in distribution package
